

What is pathway
mapping and why do
we do it?

What is pathway mapping?

Pathway mapping is an opportunity for leaders and faculty to work collaboratively as a cross organizational Community of Practice as they sequence, align, and strengthen pathways. Teams map the current state of their pathways, conduct a gap analysis and begin strategic planning for areas that could benefit from increased collaboration.

Key areas explored in the mapping process include integrated instruction/curriculum, postsecondary transitions, integrated student supports, early college credit, aligned course sequences, and labor market information.

Each step on a pathway is DESIGNED explicitly to prepare students to progress to the next level of employment and/or education.

Crossing Boundaries to Develop Effective Pathways:

The development of pathways is an iterative process that involves engaging not only college personnel across roles and departments, but also industry, workforce development, and community partners. **Pathways are a comprehensive approach to education reform** which, when done well improves services to students with varied backgrounds: incumbent workers, re-entry students, veterans, adult school students, opportunity youth, and high school students, among others. **Often the work of career pathway development begins with CTE faculty, but it is quickly recognized as a post-secondary framework that benefits all students.**

<https://www.careerladdersproject.org/wp-content/uploads/2013/11/Crossing-Boundaries-to-Develop-Effective-Pathways-Career-Development-Across-10-East-Bay-Community-Colleges.pdf>

Objectives of pathway mapping:

- Develop a shared understanding of current and desired pathway elements
- Map current pathway program elements and identify gaps and priority areas for collaborative development
- Develop a cross-organizational sector specific community of practice with self-identified priorities and work plans

Components of a Career Pathway

- **Strategic partnerships** of employers, education and training providers, community based organizations, etc. in key industries and occupational groups.
- **Multiple ways to enter and exit** postsecondary pathways, with marketable credentials at each step. (e.g. high school, one stops, basic skills, colleges). Especially important for students in time-limited workforce pgrms, such as Veterans, TANF, WIA, EDD, etc.
- **Active participation by employers** — might be in pathway development, worksite training, internships, and/or financial support for worker learning — to address regional workforce needs.
- **Innovations in program content and delivery** (e.g new technical certificates and diplomas, contextualized basic skills, flexible class schedules, combinations of online and face-to-face instruction).
- **Support services**, such as career and academic coaching, financial aid, access to public benefits, etc. Can partner with CBOs on this.

Components of a pathway map:

- Bridge Programs and other summer offerings
- High School Courses (general and CTE)
- Early college credit opportunities
- Community College Degrees and Certificates
- Industry Certifications
- Integrated Student Services
- Jobs and Wages
- Work-based learning
- Anything that can support the growth of the pathway!

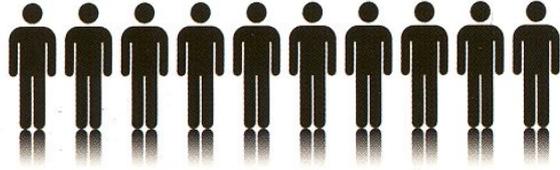

Why we create pathway maps

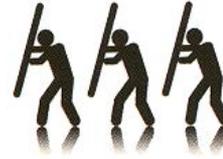

We are losing students:

Out Of Ten 9th Graders

3 Drop Out

3 Work After Graduation

4 Go To College

Out Of 4 College Students

2 Drop Out

1 Under Employed

1 Employed In Chosen Career

Nationally, each year students dropping out represent **\$1.5 trillion** in lost lifetime earning potential, in California **\$21 billion**

SOURCE: Alliance for Excellent Education, "The High Cost of High School Dropouts: What the Nation Pays for Inadequate High Schools," (Washington, DC: 2011) at

<https://all4ed.org/reports-factsheets/the-high-cost-of-high-school-dropouts-what-the-nation-pays-for-inadequate-high-schools/>

How can pathway mapping help? What do community college students say?

“I found out about a lot of resources after the third or fourth semester, and I’m like ‘Wow. These exist. It’s too late for me to join that now.’”

Integrated and Proactive Student Support

“This is the third time that I came back, and this time, I took the career assessment. I wish that I would have taken that the very first time because it would have set my path and maybe things wouldn't have been so out of reach.”

Greater Structure and Improved Sequencing

“At least for me, it was a lot of not knowing where to go. Like communications. Okay, where do you go from there? Do I become a professor? Do I work in TV? What kind of jobs do people have? It sounds corny, but are they happy in those jobs?”

Work-Based Learning and Workforce Connections

STUDENT OUTCOMES

When pathways work, our students benefit:

For Makhel and Makhi Burroughs, twins enrolled in the Computer Science & Technology (CS&T) Academy at Oakland's Skyline High School, college was not a distant possibility; it was part of their weekly class schedule. They first set foot on the campus of Berkeley City College (BCC) during an industry sector-based field trip, when they toured the multimedia arts programs and saw students present their projects. "The experience showed us what we could do later on," said Makhel. In their junior year, with a firm grounding in basic computer science principles gained from their first CS&T classes, they enrolled in 3D animation courses both at the high school and—through dual enrollment—at BCC. The college class "was different from high school in the sense that our animation had to meet certain criteria," Makhel explained. "We helped other [high school] students learn, since only a few of us took the BCC class." As high school graduation approached, they got help from their CS&T instructor to enroll as full-time students in BCC and to choose a visual design class, the next in the multimedia arts sequence. Now, Makhi envisions transferring to a four-year university program in animation and game design, while Makhel plans to pursue a four-year business degree.

Creating pathways helps us create our own communities of practice!

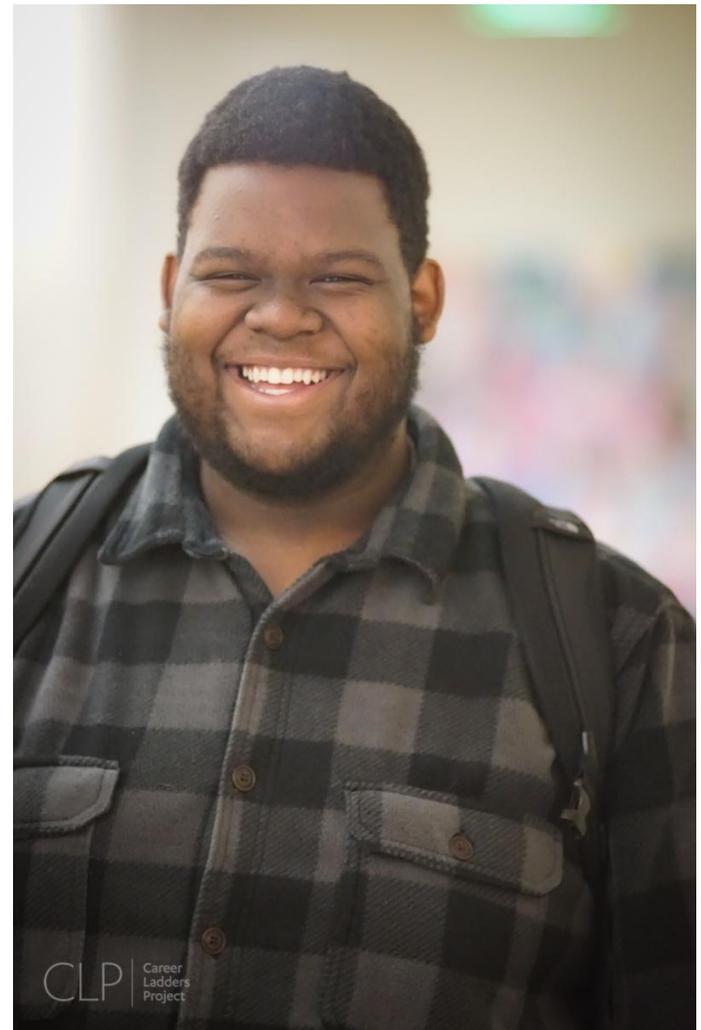

Mapping is an opportunity to build partnerships between high school, college, and industry to strengthen collaboration across institutions.

Pathway mapping is an opportunity to create a **community of practice** around a cross-institutional program of study with the **students at the center**.

Participants should be encouraged to get to know each other and feel that they can reach out to each other after the session with **follow-up questions or to explore new ideas for their pathways**.

Mission

To provide students with an outstanding education, rich with relevant academic, application and leadership experiences – using healthcare as a theme.

Description

HPHS is a small, college prep, career themed high school that prepares students for college AND career as well as provides students with numerous opportunities working within the healthcare industry. HPHS is a positive and safe campus where students can take college classes, earn industry certificates in CPR, First Responder, and Sports Medicine and participate in health related internship programs!

DRAFT: 5/20/2017

Components of a Combined High School and Community College Pathway Map

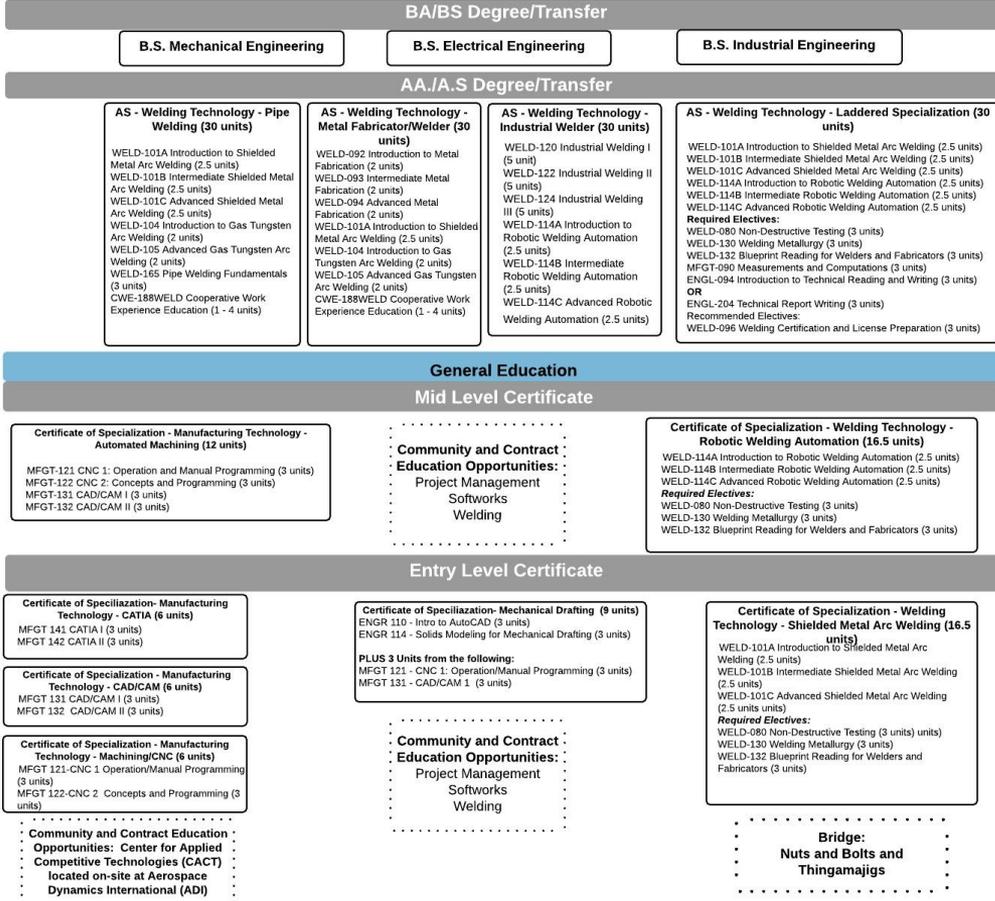

- **Bridge Programs:** Summer bridge programs are designed to “bridge” the transition from high school to college. These are often intensive multi-week experiences that occur before the start of a student’s first year in college and are generally intended to help students adapt to the college academic environment.
- **High School Courses:** High school courses include general courses offered at the high school as well as CTE and early college credit opportunities.
- **Community College Degrees and Certificates:** Each college has their own offerings of certificate and degree programs. Certificates offered by the college provide opportunities to move forward in professional fields that may lead to degrees which can provide pathways to transfer.
- **Industry Certifications:** An industry certification is a credential recognized by business and industry at the local, state or national level. ... Industry certificates measure competency in an occupation, and they validate the knowledge base and skills that show mastery in a particular industry. (CDE)

Components of a Combined High School and Community College Pathway Map (cont.)

- **Integrated Student Services:** Integrated student supports can include a number of different supports provided to students to enrich their educational experience. The list may include, but is not limited to: academic intervention, guidance, counseling, college and career planning.
- **Job and Wages (LMI - labor market information):** Labor market information includes data and analysis related to employment and the workforce that allows for more educated and informed career planning. Including examples of the jobs and wages that are attainable at each stage of the pathway helps students make informed choices.
- **Work-based Learning:** Work-based learning (WBL) is an instructional strategy that enhances classroom learning by connecting it to the workplace. These opportunities can include credit-based and/or paid work experiences, internships, or service learning. Examples: guest speakers, industry-based field trips, career exploration, problem-based learning and more.
